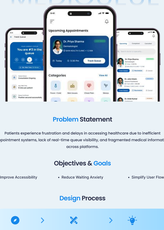
UX Case Study

Duration:2 Months

MEDIQUEUE



Problem Statement

Patients experience frustration and delays in accessing healthcare due to inefficient appointment systems, lack of real-time queue visibility, and fragmented medical information across platforms.

Objectives & Goals

- Improve Accessibility
- Reduce Waiting Anxiety
- Simplify User Flow

Design Process

4W + H Framework

PROBLEMS

- No Real-Time Visibility Of Patient Queue
- Long And Unpredictable Waiting Times
- Difficulty In Finding The Right Doctor Quickly
- Confusing And Time-Consuming Booking Process
- High Stress And Uncertainty During Medical Visits
- Repeated Calls Or Visits To Check Availability

SOLUTIONS

- Real-Time Queue Tracking To Reduce Waiting Uncertainty
- Easy Doctor Search Based On Symptoms And Specialization
- Quick And Simple Appointment Booking Flow
- Confusing And Time-Consuming Booking Process
- Centralized Medical Records For Easy Access Anytime
- Clear Visibility Of Doctor Availability And Fees

Story Board

Additional Feature

Lack Of Queue Visibility - Know Your Turn

Mediqueue Provides Real-Time Queue Tracking And Wait-Time Updates, Helping Users Reduce Uncertainty And Manage Their Time Effectively.

User Journey

Mapping a patient 's journey from the moment they need medical help to a seamless healthcare experience with Mediqueue

Quantitative Research

Explain your research in detail with observations and inferences.

Observations

30%

Users find it difficult to choose the right doctor due to lack of clear information.

50%

Users prefer booking appointments online instead of calling or visiting physically.

80%

Users reported frustration with long and unpredictable waiting times at clinics.

60%

Users want access to their medical records in one centralized platform.

90%

Users showed strong interest in real-time queue tracking to reduce waiting uncertainty.
